

ABSTRACT OF THE DISCLOSURE

A golf putter, ball retriever and retainer configured to retrieve and hold a golf ball. The putter defines a substantially symmetrical configuration from heel to toe. The ball retriever and retainer is defined by a spherical recess formed in the sole of the putter and an opening defined on the top surface thereof. The spherical recess is further defined by an opening on the sole of the putter, the sole opening defining a diameter slightly less than the diameter of a conventional golf ball. In order to receive a golf ball into the ball retriever and retainer, at least one resilient tab is defined in the sole to enlarge the sole opening. The top surface of the putter defines a shaft retriever proximate the trailing edge for engaging a golf club shaft or flag for lifting the same from the ground.
